EDUCATIONAL BACKGROUND

Bachelor of Science degree in Computer Science, 2025;

BSc (Hons) Computer Science
Completing November 2026

University of Witwatersrand, Johannesburg,
SOUTH AFRICA

TECHNICAL SKILLS

Languages

Python, Java, JavaScript, C++, C, SQL

Web/Frameworks

React, Node.js, Three.js, Streamlit, Plotly

Tools

GitHub, GitHub Actions, Linux, Power BI,
Docker, Power Query

Concepts

OOP, TDD, Data Structures & Algorithms,
REST APIs

OVERVIEW

High performing Computer Science graduate from the University of the Witwatersrand (5 Final Year Distinctions) with award winning projects in Software Design and Computer Graphics and Visualization. Concrete tech knowledge with practical experience building production-ready applications. Proficient in Python, Java, JavaScript, C, C++, and SQL.

Currently pursuing BSc Honours in Computer Science at the University of Witwatersrand - completing November 2026, on track for a distinction. First-semester marks: *Introduction to Research Methods IV* - 95% (A); *Robotics* – 90% (A); *Cybersecurity IV* – 90% (A); *Artificial Intelligence* – 75% (A); *Adaptive Computation and Machine Learning* – 72% (B). Results pending: *Research Project, Natural Language Processing, Data Visualisation and Exploration, Data Privacy and Ethics IV*.

EMPLOYMENT HISTORY

Student Intern, Sanlam Business Solutions - June/July 2025

Data Science & Analytics Intern, Future Interns (ISO 9001 Certified) - April 2026

EDUCATION

Tertiary

University of Witwatersrand

- Bachelor of Science - Computer Science (2025)
- Currently completing BSc Honours in Computer Science — Completing November 2026
- Achievements: *Game of The Year 2025, University of Witwatersrand; Project of The Year Nomination 2025, University of Witwatersrand; Golden Key International Honours Society - Wits University*

Secondary

Crawford College North Coast

- Achievements: *Full Colours for Academics; 6 IEB Distinctions*

Other

Dale Carnegie Generation Next Course

HONOURS PROJECT

Research Project: Computer Science IV

Fourier-VMamba Restoration (FVR) for Joint Low-Light & Motion Deblurring

Tech: Python, PyTorch, Custom CUDA Kernels, Linux, Slurm (HPC)

OTHER PROJECTS

Nako ILISO Tender Agent: Automated Tender-Sourcing Tool

Tech: Python, GitHub Actions

- Built for Nako ILISO, a civil engineering consulting firm, and currently in active use by the company.
- Runs on a weekly schedule to automatically scan online government tender portals and surface tenders relevant to professional civil engineering services

The Aperture Protocol: Escape Room Game — Game of The Year

Tech: Three.js, JavaScript, HTML5, CSS3, Blender

- Developed a 3D interactive game environment using Three.js.
- Implemented object interactions, collision logic, and puzzle mechanics.
- Optimised performance across the environment.

RaceIQ: Formula One Stat Tracker

Tech: TypeScript, React, Node.js, Auth0

- Integrated the Google Gemini API to generate race analytics summaries and predictive insights.
- Handled testing, performance enhancements, UI design, 3D models, mobile responsiveness, and database design.
- Deployed on Render (backend) and Vercel (frontend)

The Ledger: Student Expense Tracker

Tech: Next.js, TypeScript, Neon PostgreSQL, Prisma ORM, Tailwind CSS, Vercel

- Architected a multi-tenant financial management platform with conditional UI rendering for distinct user workflows.
